

LMS Backend

Feature Summary — Spring Boot Project

■ User Management

- Auto Registration ID generation (GURU/2026/001 format)
- JWT-based login for Admin and Student
- BCrypt password encryption
- Soft delete using isActive flag
- Auto Super Admin seeder on startup

■ Academic Management

- Location, Batch, Instructor, Course — full CRUD
- Lesson management with YouTube video URL support
- Video access control via Enrollment (hasAccess)
- Assignment creation with deadline management
- Submission system with automatic isLate detection

■ Payment & Enrollment

- Student-course enrollment management
- hasAccess flag for payment-based content access
- Monthly scheduled job (auto-blocks unpaid students)
- Manual access toggle by Admin

■ Security & Access Control

- Spring Security with JWT Authentication
- Role-based access: ADMIN and STUDENT roles
- Protected endpoints per role
- Password field hidden from all API responses

■ Communication

- Notice Board system
- Batch-specific notices (per classroom)
- Admin creates, students view

■ Tech Stack

- Java 17 + Spring Boot 4.0.6
- MySQL 8.0 + Hibernate 7 (auto DDL)
- Lombok + JWT 0.11.5
- 79 Java source files — BUILD SUCCESS

■ Key API Endpoints

POST /api/v1/auth/login	Public
POST /api/v1/auth/register	Public
POST /api/v1/location/save	Admin only
POST /api/v1/batch/save	Admin only
POST /api/v1/course/save	Admin only
POST /api/v1/assignment/save	Admin only
POST /api/v1/submission/save	Student + Admin
GET /api/v1/lesson/view/{id}	Student (enrolled)
GET /api/v1/notice/batch/{id}	Student + Admin
GET /api/v1/student/get-all	Admin only

Backend 100% Complete — Ready for Frontend Integration
